Facilities

WebXpress comes with an array of tools created to help the user build his site.
Some of the facilities are listed bellow.

● **Site manager**: helps the user to manage the general data about his site.

● **File manager:** the user can upload, download, delete, edit the files that compose his site.

● **My templates**: allows the user to manage his templates and also to choose a template from the library.

● **Dynamic modules** : there are three default dynamic that can be inserted into the user's web pages: GuestBook module, Visitor counter module and Site statistics module.

● **What is webXpress ?**
WebXpress is an easy to use tool for building presentation internet sites. It comes with a variety of templates to choose from. A web site built with webxpress can contain multiple templates which can also be modified by the user.

● **How can I use webXpress in my system ?**
WebXpress has been conceived to be installed and run as a stand-alone website and also as a module. It can be easily integrated into your existing system, providing you users with an essential tool for quickly building a website. The integration process is fairly easy and is assisted by us.

● **What technologies uses webXpress ?**
WebXpress has been built using PHP web programming language and MySQL database engine.

● **Well, how can I build my website using webXpress ?**
This is done in a very simple way. You must first choose a title and description for his site. Then, you must choose a web page template for your site. There is a great number of templates available on the system. If no template fits your requirements, you can simply modify an existing template or create a new one.

The last step of the process consists in adjusting some additional settings (like choosing one or more dynamic modules), testing and releasing your site.

Bellow you can see a screenshot of the homepage of webXpress.

● **What other facilities does webXpress provide ?**

The webXpress site builder (either full or module installation) can be complemented with additional modules :

1. DNS manager : used to create sub-domains ;
2. merchant modules : used to manage billing ;
3. email manager : used to automatically create mail accounts for your users ;
4. site promoting : used to promoted your user's new sites ;
5. live support (by phone or email);
